Personal research:

https://www.bitforms.art/exhibition/quayola-strata

Artist's:

Style

- "Wanders through the surface of an object, pushing beyond its picture plane"
- Relationship between classical figuration and abstraction
    - "Quayola handles the time we spend looking at art as a plastic artifact, something to be sculpted and suspended. The gaze is a place where the logic of a picture unfolds, seemingly excavated from beneath the image."
- "It is based on universal rules of beauty and perfection. The movement on-screen creates a dialog between two eras, two dimensions."
-
-

Concept

- Grew up in Rome, inspired by iconographic history, traditions in architecture
- Geometry, iconography of perfection
- Familiar symbols of Baroque and Renaissance periods
- Explores the conservation of archives, collage, intellectual property, appreciation of an object

Process

- Layering or stratification
- "Composition, color-schemes and geometrical features of the Flemish paintings are analyzed by algorithms, gradually revealing new abstract formations." - https://quayola.com/strata-4/
- "The idea is pretty simple: paintings are analyzed for color composition, then broken down into triangle pieces of color. Each triangle is then given a height based upon its color temperature, thereby creating a landscape from each painting. Once that analysis is complete, the works are animated and rendered to video." - https://www.printmag.com/comics-animation-design/today-s-obsession-strata/
